Secure, Flexible & Robust Enterprise Cloud Hosting

Kirona Hosting Services
Enterprise hosting designed to be dynamic, secure and resilient.

Cloud built for field workforce automation

Our cloud is designed to deliver an optimised Kirona experience for your workforce, across multiple devices, UK wide.

Backed-up and supported, 24/7

Safeguard your business's online presence with regular, secure data backups and expert support at any time of day.

Dynamic, flexible hosting for business

Consolidate your front and back office infrastructure requirements into one, state-of-the-art platform.
A secure, robust and flexible foundation. Kirona hosting services deliver optimised performance for all our field workforce applications and for all your business systems and services.

Kirona hosting services are configured to meet the exact requirements of our field workforce management solutions, as well as providing a flexible, robust platform for your enterprise hosting requirements. With multiple Tier 3+ data centre locations in the UK and platform architecture designed specifically for critical applications, our cloud delivers the very highest levels of security, availability and resilience.

Secure & highly available
Our cloud hosting is designed in-line with security best practice reference architecture and uses enterprise class VMware software to ensure secure segregation of services on the platform.

The cloud, its network and data centre sites are all highly available with no single points of failure. Automatic fail-over with 60 second recovery restores virtual machines on the platform that develop issues.

Guaranteed performance
The Kirona cloud is designed to always deliver the right amount of resource our applications need to perform optimally at all times, without contention.

CPU, RAM and storage performance are all tailored to ensure that when your workforce is in the field, our applications are responsive and perform when you need them to.

Cloud built for business
Kirona hosting not only provides the ideal foundation for our applications, it is a total infrastructure solution for your business systems and services.

The latest hardware and software from Dell, Juniper and VMware, combine with lightning-fast SSD storage and a resilient, private 10GbE network to ensure rock-solid performance and availability 24/7, 365 days a year.

Complete data protection
Making sure your data is safe and protected is paramount to us. We ensure all customer data contained within our cloud infrastructure is secure and regularly backed up.

If the worst should happen and you suffer data loss, or need to restore in a short time frame, it can be quickly and fully recovered.
Data centre infrastructure
Kirona hosting services are located in some of the most advanced data centre facilities in the UK, selected because they offer the most secure, resilient and diversely connected foundation to build and deliver our applications.

Kirona hosting services are delivered from multiple Tier 3+ data centre facilities based in the UK.

Each site boasts state-of-the-art facilities and technology that combine to deliver incredibly secure, efficient and green data centres.

They comply with the most rigorous industry standards for process quality, data security and fire safety, including:

- ISO 27001:2005
- ISO 9001:2008
- ISO 14001:2004
- ISO 50001:2011

Each site offers either N+1 or N+N redundancy on power and cooling systems, in addition to a diverse range of internet carriers to ensure the uninterrupted performance of the platforms within their data halls.

Each site is manned and monitored 24/7 by trained security personnel with access restricted to named and authorised individuals only. The latest CCTV systems, bio-metric scanners, man-traps, proximity cards and security bollards control physical access to the sites.

Award-winning PUE (Power Usage Effectiveness) rating of:

1.2

at our Slough cloud services site

100%

data centre uptime since 2011
About Kirona

Founded in 2003, Kirona is recognised as a leader in the development and delivery of Field Force Automation software solutions.

We are successful because we tailor our approach to guarantee our customers achieve their business goals: increasing the number of jobs they carry out each day, reducing overheads such as fleet mileage and administration, and providing better customer satisfaction.

Over £25m has been spent in R&D of our product with over 40,000 field workers now relying on our software to undertake their work. Our portfolio of business applications enables them to streamline their service:

• Automatically schedule jobs and monitor their progress in real-time
• Reduce administration and travel in the mobile operative’s day to provide more time for core tasks
• Locate and track your field based assets for operational and lone worker purposes

These applications can be fully integrated with their existing infrastructure, or be rolled-out as independent solutions, with the option of being hosted in Kirona’s Virtual Private Cloud. In both scenarios the workflow is seam-less from the time a customer requirement for a service is created, to its delivery by the organisation’s workforce.
